

iVAULT Online

iVAULT brings easy site configuration to online maps. Develop a personalized version of online maps specifically for your enterprise. Get the best of both worlds by layering your corporate data onto a Google base map. iVAULT Online allows CAD and GIS users to easily add and query their CAD/GIS data. iVAULT provides a single web portal for your all your inside and outside plant information.

Benefits

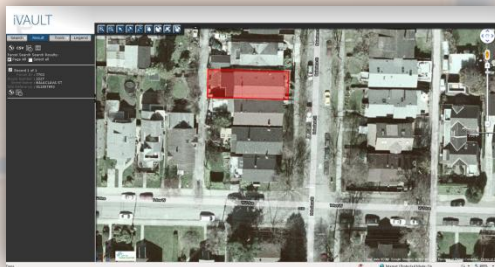

- Consistently maintained base mapping with the latest orthophoto and Street View
- Real-time access to your data from a spatial or tabular perspective
- Integration architecture to facilitate integration of iVAULT Online with your other applications
- Configurable searches using the Google Geocoder on your data
- Search and control layers from your CAD/GIS data
- Adding your data is as easy as point and click
- Search Point features from your database tables – for example financial information
- View your occupancy, finance, permitting, lease data and associated space with ease
- iVAULT Edit's custom report generation tool

What's included?

- Several functionalities
- Software assurance
- The Google Maps API Premier license, which is required for any commercial, restricted access, or non-publicly accessible website. The Premier service includes:
 - ✓ Enhanced features such as SSL encryption & advanced geocoding
 - ✓ Service level agreement (99.9% guaranteed uptime)
 - ✓ Backing PAT's technical support team
 - ✓ Online usage reports to track your map page views
 - ✓ Full control over advertising
 - ✓ Professional geocoding service

Implementation Service

Either implement iVAULT Online on your own with the backing of our documentation and helpdesk, or we can quick-start your initial configuration including:

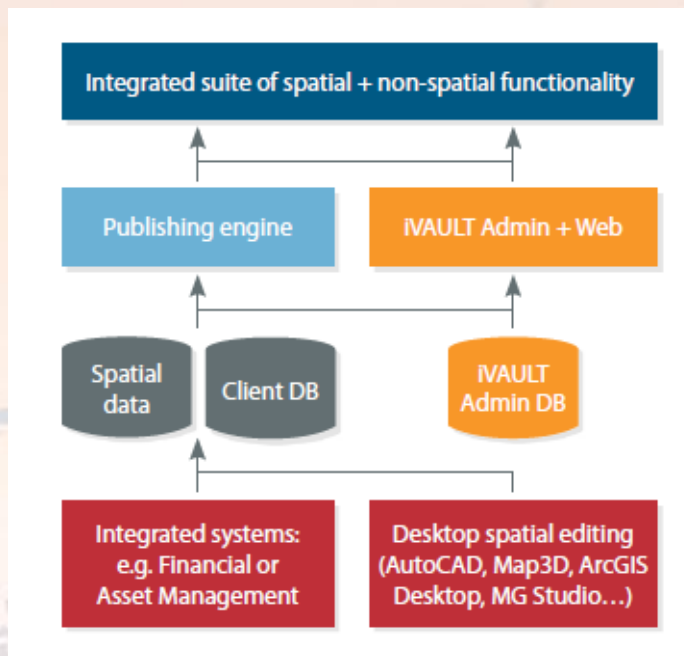

- Implementation of your data layers presented on a map
- Configuration of your integrated and searchable tabular data sets
- Development of custom reports

iVAULT System Architecture

Easy Integration: iVAULT's open architecture makes it easy to design and configure components. Leverage existing data sets and systems to minimize implementation and training costs. No programming skills required.

Open Approach: iVAULT is compatible with leading technologies: ArcGIS Server, MapGuide, Microsoft SQL Server and Oracle—allowing you to use your data and systems in their existing structure.

Cross-Platform Support: Access your data with any industry-standard web-browser.

iVAULT driven by technology and Passion!

iVAULT was designed from the ground up to provide simplicity for business workflows. Since its inception in 2002, iVAULT has migrated through the various iterations of software technology in the market, to become one of the most configurable and open web mapping applications available.

About Pacific Alliance Technologies

Pacific Alliance Technologies—a member of StarDyne Technologies Inc.—is a leading provider of Geographic Information Systems (GIS), asset management, web-based mapping, architectural, and engineering software, specializing in the customization, implementation, training and support of these solutions. Flexible and affordable, Pacific Alliance Technologies develops and implements solutions to sharpen your edge and increase productivity.

Pacific Alliance Technologies provides a unique perspective gained from being a member of the Autodesk Developer Network, a member of the Bentley Developer Network, a member of the ESRI Developer Network, by being Online Certified and by being Microsoft Gold Certified. This perspective allow us to be a leading provider of software and service to architecture, engineering, construction, government, utilities, telecommunication, oil and gas, mining, facilities management, and transportation.
